

Amendment to the Claims:

The listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

/ 1. (Currently Amended) A portable telecommunication apparatus for requesting the download of respective pages of received information from a remote source comprising:

means for receiving respective pages of information including encoded information identifying respective links to other pages;

a display for displaying the received page;

a fixed location input key[,]; and

a processor for consistently associating the input key with the encoded information identifying a respective linked page during a display period such that actuation of the input key during the display period requests the respective linked page for download from the remote source.

2. (Original) A telecommunication apparatus according to claim 1 comprising respective fixed location input keys and wherein the processor associates each input key with the encoded information identifying a respective linked page.

3. (Original) A telecommunication apparatus according to claim 1 wherein the display period is the duration of the display of the received page.

4. (Currently Amended) A telecommunication apparatus as claimed in

claims 1 wherein the input key is a dedicated key.

5. (Original) A telecommunication apparatus as claimed in claim 4 wherein the dedicated key is one of a group of alphanumeric keys provided for dialing.

6. (Original) A telecommunication apparatus as claimed claim 1 wherein the input key is a touch-sensitive area of the display.

7. (Original) A telecommunication apparatus as claimed in claim 1 wherein a caption indicative of the linked page is provided in close proximity to the input key.

A¹⁴
8. (Original) A telecommunication apparatus as claimed in claim 7 wherein the caption is provided immediately above the input key.

9. (Original) A telecommunication apparatus as claimed in claim 1 wherein the remote source is a computer capable of connection to the World Wide Web (WWW).

10. (Original) A telecommunication apparatus as claimed in claim 1 wherein the apparatus comprises a markup language decoder.

11. (Original) A telecommunication apparatus as claimed in claim 1 wherein the association between the user-operable input means and the link is achieved by means of a particular tag in the page of information.

12. (Currently Amended) A telecommunication apparatus as claimed in claim 1 wherein the apparatus is ~~arranged to be mountable~~ mountable in a vehicle.

13. (Original) A telecommunication apparatus as claimed in claim 1 wherein the apparatus is a portable wireless telecommunication apparatus.

✓14. (Currently Amended) A method of requesting the download of respective pages of received information from a remote source in a portable apparatus, comprising:

receiving respective pages of information including encoded information;

A¹⁴ identifying respective linked other pages, the encoded information including a functional element for consistently associating operation of an identified input device with a request for download of the linked page, and a visual element for labelling the operation;

separating the labelling and functional elements of the encoded information;

displaying the labelling information at a predefined position; and

defining the function of the identified input device using the functional element of the encoded information such that on operation of the input device the respective linked page is requested for download.

✓15. (Cancelled) without disclaimer or prejudice.

A¹⁵ 16. (New) A method according to claim 14 wherein the portable apparatus comprises respective fixed location input keys and each input key is associated with the encoded information identifying a respective linked page.

17. (New) A method according to claim 16 wherein the labeling information comprises a caption indicative of the linked page and the caption is provided in

proximity to an associated input key.

AB
____ 18. (New) A method according to claim 17 wherein the caption is provided
above the associated input key.

____ 19. (New) A method according to claim 14 wherein the remote source is a
computer capable of connection to the World Wide Web (WWW).
